DETAILED ACTION

Election/Restrictions - Election of Species Requirement

This application contains claims directed to two groups of species of the claimed invention from which Applicants must elect a single species.

The first group of species (i.e., species of platform and tendon arrangement) from which Applicants must elect is:

Figs. 1 and 3 (single column platform and synthetic tendon located adjacent steel tendon);

Figs. 2 and 4 (single column platform and synthetic tendon located within steel tendon);

Fig. 5 (multi-column platform and synthetic tendon located adjacent steel tendon);

Fig. 6 (multi-column platform and synthetic tendon located within steel tendon);
or

Figs. 7 and 7A (tanker mooring and synthetic tendon located within steel tendon).

The second group of species (i.e., species of damping means) from which applicant must elect is:

Fig. 8 (dry computer controlled damping system for exerting damping force to disrupt vertical resonance in platform system);

Fig. 9 (wet computer controlled damping for exerting damping force to disrupt vertical resonance in platform system);

Fig. 10 (adjustable passive system for exerting damping force (including dashpot (41)) for exerting damping force to disrupt vertical resonance in platform system);

Figs. 11 and 11A (passive tuned oscillator devices (including air spring (51)) for exerting damping force on platform); or

Figs. 12 and 12A (driven oscillator damping device for exerting damping force on platform).

Applicants are required under 35 U.S.C. 121 to elect a single disclosed species from each of the two groups of species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, independent claim 1 appears to be generic.

Applicants are advised that a reply to this requirement must include an identification of the species that is elected from each of the two groups consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicants must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should Applicants traverse on the ground that the species are not patentably distinct, Applicants should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicants are advised that the reply to this requirement to be complete must include an election of the species to be examined even though the requirement be traversed (37 CFR 1.143).

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
